1 Regular Expressions

Give regular expressions for each of the following languages over the alphabet {0, 1}.

- 1. All strings containing the substring **000**.
- 2. All strings *not* containing the substring **000**.
- 3. All strings in which every run of **0**s has length at least 3.
- 4. All strings in which **1** does not appear after a substring **000**.
- 5. All strings containing at least three Θ s.
- 6. Every string except 000. [Hint: Don't try to be clever.]
- 7. All strings *w* such that *in every prefix of w*, the number of **0**s and **1**s differ by at most 1.
- 8. Any string not in $\mathbf{0}^* + \mathbf{1}^*$
- *9. All strings containing at least two 0s and at least one 1.
- All strings in which the substring 000 appears an even number of times.
 (For example, 0001000 and 0000 are in this language, but 00000 is not.)
